What do we know about internationalization strategies implementation and what are we missing?

ABSTRACT

Internationalization is a particular kind of strategy that can be described as a complex and multidimensional decision process. However, good strategies do not guarantee business success unless they are successfully implemented. This study aims to investigate what are the key internal factors that impact the implementation of the internationalization strategy of the firm. We conducted a descriptive review of the literature, on articles in the ISI Web of Science database, followed by the use of categorical analysis technique. Results show that antecedents represent most of internationalization studies and little attention has been given to the key internal factors. In addition, most of the discussion focus on Internal Context issues (organizational structures, relationship between business units and people/leadership capabilities), but key factors concerning the Strategic Implementation Process (communication, commitment and control systems) have been neglected by researchers and compromise the holistic understanding of the internationalization process. In this study, we propose an analytical framework bridging the strategy and internationalization perspectives on the issue of implementation and indicate gaps in the internationalization body of research concerning the key internal facts. In doing so, we expect to contribute by providing a systematic understanding of the key factors influencing the implementation of internationalization strategies.

1. INTRODUCTION

Internationalization is a particular kind of strategy that can be described as a complex and multidimensional decision process (Kraus et al., 2016), and that has gained prominence in the last few decades among business researchers and practitioners with the expressive growth in international business activity, especially by internationalizing firms from the emerging economies (Yaprak et al., 2011). However, good strategies do not guarantee business success unless they are successfully implemented (Ho et al., 2014). Most initiatives fail to reach their full potential (Cândido & Santos, 2015), despite an increasing number of companies dedicating time and money to mapping the market, gathering knowledge and surveying options to develop better strategies (Leonardi, 2015), hence the importance of implementation to achieve business goals.

Multiple factors impact the success or failure of implementing a pre-determined strategy (Li et al., 2008; Okumus, 2001) and many of these attributes are internal to the organization and not external to it (Nutt, 1987). Nevertheless, the firm internationalization literature has focused primarily on the antecedents of the strategic decision to enter foreign markets, rather than its execution. In addition, factors influencing the outcomes of internationalization have not received systematic analysis (Carr et al., 2010).

In this study, we bridge the theory of business internationalization and strategic implementation in order to answer what are the key internal factors that impact the implementation of the
internationalization strategy of the firm. In doing so, we expect to contribute by providing a systematic framework for factors analysis and indicating eventual gaps in the internationalization body of research.

In order to answer that main research question, secondary objectives were established: (i) to identify the implementation stages and the parallels between the two literatures; and (ii) describe and analyze how implementation is being discussed and the research gaps in the internationalization literature. Aiming to provide a more in-depth analysis of the current state of the literature on the key internal factors, we conducted a descriptive and extensive review of the literature, focused on articles in the ISI Web of Science database, chosen as a relevant repository of international scientific production. With no time-limit, the search returned 460 articles and these preliminary results were then analyzed and categorized, resulting in 22 articles involving some type of key internal implementation factor and analysis.

We start this study by reviewing the relevant literature about strategic implementation and the internationalization perspective on implementation, proposing an analytical framework of implementation considering the parallels of the strategy and internationalization perspectives. After presenting the methodological procedures, we conduct descriptive and qualitative analyses over the selected articles. At last, we discuss the results, limitations and future researches opportunities.

We found out that antecedents, motivations or the strategy content make up the vast majority of research on internationalization studies, and comparatively very little attention has been given to the key internal factors. Also, there seems to be no big debates over the Internal Context factors (organizational structures, relationship between business units and people/leadership capabilities), but most of the work is empirical and there is no sign of a consolidated theory on this matter. And most important, that are some key issues, mainly concerning the Strategic Implementation Process (communication, commitment and control systems) that might have been seriously neglected by internationalization researchers and therefore represents a gap in the holistic understanding of the internationalization process and a prolific field for future research.

2. LITERATURE OVERVIEW

2.1 Strategic implementation

Good strategies do not guarantee business success unless they are successfully implemented (Ho et al., 2014). Most initiatives fail to reach their full potential (Cândido & Santos, 2015), despite an increasing number of companies dedicating time and money to mapping the market, gathering knowledge and surveying options to develop better strategies (Leonardi, 2015), hence the importance of implementation to achieve business goals. From the strategy literature perspective, strategic implementation can be understood as "a dynamic, interactive and complex process composed of a series of decisions and activities by managers and employees - impacted by a number of interrelated internal and external factors - to turn strategic plans into reality in order to achieve strategic objectives" (Li et al., 2008, p.6).

Multiple factors impact the success or failure of implementing a pre-determined strategy, and many of these attributes are internal to the organization and not external to it (Nutt, 1987). The main influential factors found in the strategy literature can be classified from a structural perspective, also known as "hard factors" and a perspective of interpersonal processes, also called soft factors (Skivington & Daft, 1991; Nobel, 1999) and a combination of both perspectives may occur (Li et al., 2008).

The structural perspective includes issues related to organizational structure (Olson et al., 2005; Drazin & Howard, 1984) and management and control mechanisms (Kaplan & Norton, 2001; Hrebiniak, 2006). The perspective of interpersonal processes involves a range of behavioral and cognitive issues (Noble, 1999), covering the quality of communication (Forman & Argenti, 2005; Rapert et al., 2002; Alexander, 1985), leadership capabilities (Nutt, 1987; Hrebiniak, 2006; Govindarajan, 1988), team commitment (Hrebiniak, 2006; Heracleous, 2000; Noble & Mokwa, 1999) and the relationship between different units (Walker & Ruekert, 1987; Gupta, 1987; Chimhanzi, 2004). Li, Guhui and Eppler (2008) identified these as the most recurrent internal key factors in the strategy implementation literature, plus another one called 'strategy formulation' that refers to the consistency of the strategic plan to assure an implementation success.
The main constraints and facilitators found in the literature are directly associated with the key factors attributed to the implementation process and are supported by empirical evidence researched with market executives (Hrebiniak, 2006; Viseras et al., 2005; Kaplan & Norton, 2001). For instance, the Communication factor would be compromised if there was a lack of clarity in the definition and dissemination of tasks, critical activities of implementation and those responsible (Rapert et al., 2002; Alexander, 1985), ineffective disclosure of global strategic decision goals for all levels of the company (Peng & Litteljohn, 2001), or even difficulty of access and communication by employees and lower administrative levels with top management (Forman & Argenti, 2005). In addition, constraints regarding the ‘Commitment’ factor, such as the lack of ownership of the critical employees for the implementation (MacMillan & Guth, 1985), managers’ negative perception of the likely results of the strategy (Noble & Mokwa, 1999); or the misalignment of interests and individual needs in relation to the expected result (Hrebiniak, 2006; Heracleous, 2000), might harm the potential results of the internationalization process.

Another possible classification for the key factors that contribute to the success of a strategic initiative would be according to the steps of the implementation process: strategic context, context (internal and external), strategic process and outcome (Okumus, 2001). The strategic content refers to the development and direction of the strategy itself. The external and internal strategic contexts deal with uncertainties of the environment and organizational structure, culture and leadership, respectively. The operational process includes allocation of resources and tasks, as well as communication and control. And, finally, the results address the delivery of the entire implementation process (Okumus, 2001). The steps are complementary and non-sequential, so each one must be executed correctly in order to obtain the best results with the strategic implementation. Table 1 summarizes the main influential factors, categorizing them according to the stage of implementation in which they are most relevant.

2.2 Internationalization perspective on implementation

Internationalization is a particular kind of strategy and can be described as a complex and multidimensional decision process (Kraus et al., 2016). In this process, isn’t enough to design and plan the corporate global strategy also, because implementing it successfully involves some different and relevant challenges (Hrebiniak, 1992). Nevertheless, the firm internationalization literature has focused primarily on the antecedents of the strategic decision to enter foreign markets (Li & Deng, 2017; Schu et al., 2016; Laamanen et al., 2012; Keen & Eteman, 2012), rather than its execution. In addition, factors influencing the outcomes of internationalization have not received systematic analysis (Carr et al., 2010).

It must be added that the few studies that aim to clarify the international strategy implementation focus on some specific trait or literature parallel as innovation (Barbosa and Romero, 2016), reshoring strategies (Ocicka, 2016) or political parties (Thrassou et al., 2011), for example. One noticeable exception is the Yaparak, Xu and Cavusgil (2011) attempt to call attention to the interplay among strategy, structure and process in affecting international performance, highlighting a lot of incongruence between internationalization strategy and internal structure and process, but yet failing to provide a comprehensive approach to the key implementation factors that drives internationalization strategy success.

![Fig. 1 Data analysis plan](image)

**Source:** Elaborated by the authors.

Using Okumus (2001) stages-framework and Li, Guohui and Epler (2008) recurrent key internal factors, it’s possible to draw a parallel between the strategy and the internationalization literatures, categorizing the key factors for implementing internationalization strategies, as show on Figure 1. For example, the main decisions of internationalization identified as international orientation, international marketing skills, international innovativeness and international market orientation (Knight & Kim, 2009) can be related to the ‘strategic formulation and decisions’ aspect of the implementation and therefor to the ‘strategic content stage’. In these stage, both

</tr>
<tr>
<td>Outcomes</td>
<td>Results: tangible and intangible outcomes of the strategy.</td>
<td>Export growth (Rock &amp; Ahamed, 2014); Global performance impact (Gammelgaard et al., 2012).</td>
</tr>
</tbody>
</table>

The ‘internal context’ stage will raise important issues related to the organizational structure (Kraus et al., 2016; Chiesa, 1996), the relationship between business units (Hendry, 1996; Williams & Nones, 2009; Gilbert & Heinecke, 2014; Gammelgaard et al., 2012) and to people/leadership capabilities (Kraus et al., 2016; Efrat & Shoham, 2012; Williams & Nones, 2009; Nawab et al., 2011). The ‘strategic process’ will discuss different internal aspects of the implementation, such as communication (Borini et al., 2012), commitment (Javalgi & Todd, 2011) and management/control systems (Miao et al., 2011; Lin & Cheng, 2013). Table 1 synthesizes the analytical framework of implementation in the strategy and internationalization perspectives.

3. METHODOLOGICAL PROCEDURES
In as effort to identify the key internal factors that impact the implementation of the internationalization strategy of the firm we conducted a descriptive and extensive review of the
literature. We first conducted a search for journal articles utilizing the ISI- Web of Knowledge database, chosen as a relevant repository of international scientific production. The search terms included internationalization or internationalization associated with the terms factor, variable or driver with no time-limit, but restricted to the business and management subject area within which the search was conducted. The search returned 460 articles and these preliminary results were then analyzed for an indication of relevance to the field of strategic implementation. Often, the abstracts provided us with ample information about the methods and unit of analysis. Based on a reading of these abstracts, we were able to eliminate the many articles that focused on antecedents of internationalization or used internationalization as a context instead of the analysis subject or yet didn’t have companies as the main unit of analysis. We found that antecedents and motivations make up the vast majority of research on internationalization studies.

Once relevant articles and potentially relevant articles were identified, we went on to read the complete articles to make sure that each fit the requirements of the search. At this point we identified and discarded articles discussing strategic content or external context variables. Each article that fulfilled the requirement of focusing on business internationalization studied at the strategic implementation level of analysis and focusing on internal key factors was then indexed. Our final list of reviewed articles included 22 studies. All studies included in our review had to involve some type of key internal implementation factor and analysis. Some studies included content or external context findings but were included if they also showed results at the internal context or strategic process stages.

The 22 studies were analyzed using the categorical analysis technique, one of the dimensions of content analysis proposed by Bardin (1979). A summary was then produced for each article, which listed the categories: year of publishing, company size (SME – small and medium enterprises or MNC – multinational corporates), methodological approach (theoretical or empirical), the internationalization key internal factors analyzed, their strategy approach equivalent and the implementation stage they refer to. The article summaries provided us with easily identifiable markers for comparisons of the research being conducted in the field. Figure 1 demonstrates the main steps of the research.

3.1 Results Analysis
In this section, we analyze the 22 reviewed articles as described in the methodological procedures, in order to identify the key internal factors that impact business internationalization strategies.

3.2 Descriptive Analysis
Although we did not impose any time-limit to the research, the results we found when we examined the articles per year of publishing revealed that the concern about internal key factors for strategic implementation is a reasonably new issue in the business internationalization literature. As Figure 2 demonstrates, 91% of the reviewed articles were published in the last 10 years. Only 2 articles (Hendry, 1996; Chiesa, 1996) were published earlier and can be considered among the pioneers on the matter.

![Fig. 2](image)

**Source:** Elaborated by the authors.

Most of the articles reviewed (86%) presented an empirical methodological approach (Figure 3), based mostly on primary data collection via interviews and surveys. The predominance of empirical studies reinforces the developing aspect of the theory (Cooper et al., 2006), as researchers are still collecting information from the field, in order to expand their comprehension of the implementation issue in the business internationalization context.

![Fig. 3](image)

**Source:** Elaborated by the authors.
The relevance of the key internal factors of strategic implementation in the internationalization literature is shown in Table 2. The categorization of the articles reveals that the issue of the key internal factors for implementation is relevant for either size of company, even considering their particularities.

Initially, what draws attention is the fact that Internal Context factors are considerably more researched than the ones concerning the Strategic Process. In reference to the strategic key factor ‘Organizational structure’ the main issue is the Manufacturing flexibility, discussing matters of centralization or decentralization of the subsidiaries. Chiesa (1996) points out that the degree of dispersion of external sources of knowledge, and the degree of dispersion of the key internal R&D resources influence the structural outcome. Rodriguez, Wise and Martinez (2013) and Fisch and Zschoche (2011) agree that the flexibility to shift production among subsidiaries, adapting manufacturing processes, and cooperative relationships impacts the firm’s innovation and market expansion-adaptation capabilities, increasing profitability of international production networks. In addition, Miozzo and Mo (2012) and Sanna-Randaccio and Veugelers (2007) researches bring evidences that decentralization on the headquarters-subsidiary relationships can provide flexibility and help to take advantages of favorable external factors.

The ‘People/leadership capabilities’ strategic key factor is one of the most researched internal aspects of the implementation. The Managers competence stands out as being the most preeminent topic in the internationalization literature reviewed and the implementation stage they refer to.

As a whole, the descriptive analysis of the articles reveals the initial stage in which the internal aspects of strategy implementation are found in the business internationalization literature, despite their relevance to different sizes of company. The following qualitative analysis will provide evidence of which aspects are slightly better developed and which have been neglected.

### 3.3 Qualitative Analysis

The qualitative analysis was based on the categorization of the reviewed articles as: (i) the internationalization key internal factors analyzed; (ii) their strategy approach equivalent; and (iii) the number of articles per method. The sum of the number of articles in Table 1 exceeds the total of 22, because some of the reviewed articles discuss more than one key factor.
evidences point to the same conclusion, that being that managerial capabilities have a positive influence on the expected outcome. Nummela, Saarenenketo and Loane (2016) highlight the importance of managerial experience in filtering the external drivers of failure. In a complementary way, Chebbi, Yahiaoui, Vrontis and Thrassou (2017) reinforce different attributes of leadership (nurturant, personal touch, expertise, simple living and high thinking, loyalty, self-sacrifice, and the giving model of motivation) impact in successful internationalization. Beleska-Spasova, Glaister and Stride (2012) and Efrat and Shoham (2012) add more evidence to the matter, pinning out that managerial capabilities can overshadow physical resources and external factors in affecting positively the international success of a firm.

In regard to the strategic key factor ‘Relationship between business units’, the reviewed articles focus on Business networks and Autonomy issues. Hendry (1996) and Gammelgaard, McDonald, Stephan, Tuselmann and Dorrenbacher (2012) proposes that business networks is one of the determinants for the creation of an effective international organization. Mort and Weerawardena (2006) explain that link with evidences that fundamental and secondary networking capabilities enable identification and exploitation of market opportunities and facilitates the development of knowledge-intensive products. Stoian, Rialp, Rialp and Jarvis (2016) deepen pointing out that networks play a crucial role for knowledge creation and exchange, and frequently represent the most reliable resource at firms’ disposal, and Hashim (2015) complements by stating its role as a way to surpass external difficulties. About the Management/subsidiary autonomy factor, Gilbert and Heinecke (2014) and Gammelgaard, McDonald, Stephan, Tuselmann and Dorrenbacher (2012) agrees that increases in autonomy to an appropriate degree are highly contingent upon contextual influences, and Miozzo and Mo (2012) assigns the contingent role to the flexibility that it brings to the firm.

In contrast, the Strategic Process factors are noticeably less discussed in the reviewed internationalization literature. Only three researches address the ‘Management/ control system’ strategic factor. Discussing subsidiary performance evaluation, Miao, Choe and Song (2011) states that subsidiary-to-parent knowledge flow is facilitated by establishing efficient formal mechanisms such as an expatriation policy and a subsidiary performance evaluation system. However, Miozzo e Mo (2012) discuss that international tools for integration and co-ordination, including corporate processes and global supply chain management, reinforce centralization, which may lead to less flexibility to take advantages of external factors. On a different topic, Lin and Cheng (2013) show that CEO total compensation level and Management Team Total (TMT) compensation were positively related to firms’ international expansion level.

Even more critical, the ‘Communication’ factor was discussed in only one reviewed article. Borini, Oliveira, Silveira and Concer (2012) showed that organizational communication is vital in reducing uncertainty and disseminating knowledge, therefore the reverse transfer of innovation depends on strong integration (communication) between the parent and its subsidiaries, among other factors. The research builds on the concept of Socialization, defined as “information-processing routines that facilitate the transfer of knowledge from the subsidiary to its parent company, related to the ability to facilitate relationships of trust, create a shared vision, and minimize differences regarding preferences and interests among members in the network, using mechanisms for information exchange that meet the costs and benefits requirements” (Borini et al., 2012).

Finally, it draws attention to the fact that there are no articles addressing the ‘Commitment’ strategic key factor, related to the continuous involvement and commitment of all employees throughout the implementation.

4. DISCUSSION, IMPLICATIONS, RESEARCH DIRECTIONS AND LIMITATIONS

The overall research problem which guided this study was: “what are the key internal factors that impact the implementation of the internationalization strategy of the firm?”. To answer that we propose the following specific objectives: to identify the implementation stages and the parallels between the two literatures; and to describe and analyze how implementation is being discussed and the research gaps in the internationalization literature. Therefore, we conducted a descriptive review of the literature, focused on articles in the ISI Web of Science database, chosen as a relevant repository of international scientific production. With no time-limit, the search returned 460 articles and these preliminary results were then analyzed and categorized, resulting in 22 articles involving some
type of key internal implementation factor and analysis.

The findings highlight that antecedents, motivations or the strategy content make up the vast majority of research on internationalization studies, and comparatively very little attention has been given to the key internal factors, corroborating the research of Carr, Haggard, Hmieleski and Zahra (2010). The descriptive analysis of the reviewed articles confirms the initial stage in which the internal aspects of strategy implementation are found in the business internationalization literature, despite their relevance to different sizes of company. The majority of the articles were published in the last 10 years and are based on empirical evidence, what reinforces the developing aspect of the theory (Cooper et al., 2006), as researchers are still collecting information from the field, in order to expand their comprehension of the implementation issue in the business internationalization context.

The findings also suggest that Internal Context factors (organizational structures, relationship between business units and people/leadership capabilities) are considerably more researched than the ones concerning the Strategic Process (communication, commitment and control systems). In addition, there seems to be no big debates over the Internal Context factors, with most of the results pointing in the same direction about the issue discussed. ‘Business networks’, ‘Management competence’ and ‘Manufacturing flexibility’ were the most discussed key internal factors among the reviewed articles.

In contrast, the Strategic Process factors are noticeably less discussed in the reviewed internationalization literature. The evidences show that ‘Communication’ and ‘Commitment’ seem to be the most critical under researched internal factors, overlooked even in studies that attempted to articulate different implementation factors (Yaprak et al., 2011). The results presented by Borini, Oliveira, Silveira and Concer (2012) echo the strategic perspective on the importance of quality communication for successful implementation (Peng & Littljohn, 2001), by showing that organizational communication is vital in reducing uncertainty and disseminating knowledge, therefore the reverse transfer of innovation depends on creating a strong shared vision through communication between the parent and its subsidiaries, evidencing the validity of

the parallel between both literatures. However, the strategy literature points out other constraints to effective communication that have yet to be addressed by the internationalization literature, such as the clear definition and dissemination of tasks and responsibilities (Rapert et al., 2002; Alexander, 1985) and the difficulty of access and communication by employees or subsidiaries with top management or head-quarters (Forman & Argenti, 2005).

Finally, as that there are no articles addressing the ‘Commitment’ strategic key factor, related issues such as the lack of ownership of the critical employees for the implementation (MacMillan & Guth, 1985), managers’ negative perception of the likely results of the strategy (Noble & Mokwa, 1999) or the misalignment of interests and individual needs in relation to the expected result (Hrebiniak, 2006; Heracleous, 2000) might still be an important missing attribute to the holistic understanding of the successful internationalization process.

It is worth mentioning some limitations of this research that concern the delimitation of the database used, being restricted to ISI – Web of Knowledge, and the researched terms used to compose the reviewed articles sample. Although we intended to pursue an extensive research, we do not intend nor imply that it is exhaustive.

We aimed to provide a more in-depth analysis of the current state of the literature on the key internal factors by bridging the theory of business internationalization and strategic implementation. In doing so, we expect to contribute by providing a systematic framework for factors analysis and indicating the main gaps in the internationalization literature. Future researches concerning the implementation of internationalization strategies might be facilitated by the analytical framework provided (Table 1). In addition, some key issues, mainly concerning the Strategic Implementation Process (communication, commitment and control systems) seem to have been seriously neglected by internationalization researchers and therefore represents a gap in the holistic understanding of the internationalization process and a prolific field for future research.

RESUMO
A internacionalização é um tipo particular de estratégia que pode ser descrita como um processo de decisão complexo e multidimensional. No entanto, boas estratégias não garantem o sucesso a menos que sejam bem implementadas. Este estudo investiga quais os principais fatores internos que impactam a implementação da estratégia de internacionalização da empresa, através de uma revisão descritiva da literatura, em artigos no banco de dados da ISI Web of Science, seguida de técnicas de análise por categorias. Os resultados mostram que antecedentes representam a maioria dos estudos de internacionalização e pouca atenção tem sido dada aos principais fatores internos. Além disso, a maior parte da discussão concentra-se no Contexto Interno (estruturas organizacionais, relações entre unidades de negócios e pessoas / capacidades de liderança), mas fatores-chave sobre o Processo de Implementação Estratégica (sistemas de comunicação, compromisso e controle) foram negligenciados por pesquisadores, comprometendo a compreensão holística da internacionalização. Neste estudo, propomos uma estrutura analítica que articule as perspectivas de estratégia e internacionalização sobre a questão da implementação e indique lacunas no corpo de pesquisa de internacionalização sobre os principais fatores internos. Ao fazê-lo, esperamos contribuir fornecendo uma compreensão sistemática dos principais fatores que influenciam a implementação de estratégias de internacionalização.
